

2705- Microsoft Dynamics developers

Microsoft Dynamics Developer

Gurgaon, NCR, India

FullTime

Position Summary

The Microsoft Dynamics CRM Developer will be responsible for participating at an intermediate level in all phases of the development and maintenance life cycle for Microsoft Dynamics CRM at ALLDATA. The ideal candidate will have hands-on experience with Dynamics CRM customization, C# programming, configuration (including UI / form development – web + unified client interface), Microsoft flows, custom development (including Unified Service Desk), web resources, data integrations, and CRM solution file management. The candidate must have the ability to manage / prioritize multiple demands from a large user base across multiple departments. The candidate should have deep knowledge of Dynamics 365 CRM in all functional and technical areas.

Key Responsibilities

Participating in design sessions with key business users, gathering and documenting business processes and requirements for the system

- Architecting the CRM system, related customizations and reports to model the business organizational process
- Design & Develop D365 CDS PowerApps model, automating business processes with Microsoft Flow
- Design & Develop Azure Data Factory pipelines and flows
- Building and configuring CRM forms, views, dashboards, workflows
- Building plugins, Solution deployments, debugging etc
- Developing reports using FetchXML
- Balance business users requests and requirements with technical constraints
- Experience with D365 CDS PowerApps model, automating business processes with Microsoft Flow
- Working with internal support members to resolve technical issues with servers and other related technologies to the internal CRM system
- Maintain code repository and working knowledge of GitHub for source control
- Effectively utilize SDK for administration of CRM system
- Support of the application including fixing application issues

- This position offers multiple opportunities to work with other highly energetic team members within both the immediate team as well as coordinate collaborative development across projects and teams.
- Collaborate with a team of scrum masters, product owners and fellow engineers (remote and local)
- Document and lead the implementation of technical features, improvements, and innovations
- Continually look for ways to improve performance, quality, and efficiency.

Requirements:

- A systems thinker, able to move fluidly between high-level abstract thinking and detail-oriented implementation, open minded to new ideas, approaches, and technologies
 - A data and fact-driven decision maker, with an ability to make quick decisions under uncertainty when necessary; able to quickly learn new technologies, tools, and organizational structures/strategies
 - Strong design and development experience with Microsoft Dynamics
 - Understanding of current industry standard best practices regarding integration, architecture, tools, and processes
 - Experience translating client requirements into technical designs.
 - Agile experience in engineering capabilities and an architectural mind-sets.
 - Strong oral and written communication skills — and a knack for explaining your decision-making process to non-engineers
 - A thorough grasp of IT concepts, business operations, design and development tools, system architecture and technical standards, shared software concepts and layered solutions and designs
- Education and/or Experience**
- Bachelor's Degree in Computer Science or a Science, Technology, Engineering or Mathematics (STEM) discipline from an accredited university
 - **Requires 6-8 years of software engineering experience using the following languages, tools, and technology:**
 - o C# (C-Sharp)
 - o Microsoft Dynamics 365 CE/CRM
 - o Plugin development, customizations, JavaScript, C#, .NET, HTML, MVC, SQL Server including plugins, scripting and form creation
 - o CRM API, REST/ODATA and SOAP endpoints
 - o Visual Studio, Git source control and CRM SDK
 - o Ability to configure security groups, roles and teams
 - **Requires 2-3 years of software engineering experience using the following languages, tools, and technology:**

o Microsoft Power Apps

o Microsoft Flows

o ETL technologies like Scribe Online, Microsoft Azure data factory or Kingswaysoft

o Azure Data Factory, Azure SQL, DevOps pipelines

Desired Skills:

- Knowledge of the O365 platform as it pertains to feature sets that integrate with Dynamics CRM

solutions including SharePoint, Mobility

- Developing Azure Logic and Azure Functions

- Familiarity with Data Export Service and Azure SQL

- Microsoft Certifications on Dynamics 365 CE

Boolean String:

(“microsoft dynamics” OR “ms dynamics” OR d365 OR “dynamics 365”) AND azure AND crm AND devops AND (pipeline OR pipelines) AND (adf OR “azure data factory”) AND (git OR github) AND (powerapps OR “power apps”) AND (flow OR flows)
