

2755- Solution Architect

Solution Architect
Gurugram, India
Full Time

Key Responsibilities:

- Define, Document, and Promote (internally and externally) the high-level design and software architecture required to fulfill Wink's business objectives and unique customer needs
- Provide architectural guidance and direction to the technology team building the solution and review deliverables for design compliance.
- Evaluate technology alternatives and make recommendations for specific technology components, frameworks, 3rd party open-source libraries, etc. for the given solution
- Define the Non-Functional Requirements for the solution and review the final implementation to ensure compliance
- Help define the operational and customer onboarding models for the solution
- Work closely with colleagues in Wink's product teams to define market-leading solutions for unmet client needs. Answer questions like "Can this be done? How hard is it?"
- Support sales efforts as a client-facing Wink Platform Expert to advise on integrating with the Wink platform, and answering questions on security, scalability, etc.
- Support IP development and patent filing document preparations with inputs and as a reviewer

What you need:

- Mastery of .NET Core with significant experience as a developer, designer and software architect is a MUST
- Significant expertise with Cloud Native, Microservices & API based Web applications
- Demonstrable experience with at least one large cloud computing provider (preferably Azure)
- Strong skill set on Azure Communication Protocols and scalability
- Prior experience building and launching a new product or platform as opposed to updating/maintaining an existing system is a MUST
- Familiar with Information security principles, high availability designs, and high-performance patterns along with diagnosing & eliminating bottlenecks
- Creativity and a passion for tackling challenging software problems and willingness to work in a start-up environment
- Strong communication and collaboration skills is a MUST
- Ability to write crisp documentation, effectively whiteboard and create simple, easy to understand diagrams for complex systems
- University degree Computer Science or equivalent. Advanced degree preferred.
