

Sr. Software Engineer- SRSA

About SRS Acquiom

At SRS Acquiom, our focus is on simplifying complex transactions in M&A and in the Loan Agency markets. Since 2007, we have been continuously innovating to solve issues for some of the industry's most sophisticated buyers, sellers, borrowers, lenders, and counsels. Our top-tier team has supported more than **7,000** deals with **\$815B** in aggregate value including high-profile transactions such as **Coca Cola Corporation's acquisition of Body Armor**, **Pfizer's acquisition of ReViral Limited**, and **Intel's acquisition of Granulate Cloud Solutions**. We are looking for extraordinary people to help drive our continued success. If you are looking to join a growing, entrepreneurial environment in an established company, we want to hear from you!

Position Summary

SRS Acquiom is currently seeking a contract-to-hire Senior Software Engineer and technology leader that will work with a dedicated, cross-functional agile product team in a diverse, fast-paced environment. This is a remote position with the option to be in our office in Denver, CO.

We're Team Dash. We're responsible for the SRS public-facing Deal Dashboard web application. This is where deal participants go to see all aspects of a merger or acquisition. Our work is critical to our customers. Accuracy and timeliness are crucial. We have high standards and produce high quality results.

We use AWS, Postgres, Kafka, NodeJS, ExpressJS, Svelte, Docker, and Kubernetes. We organize our work using Jira. We build and deploy with Bitbucket and Jenkins. We have automated test coverage and deploy many times per day.

The salary range for this position is between \$k - \$k, depending on level of experience.

Primary Responsibilities

- Understand our users' needs and collaborate with team members to ensure we have user stories that provide value to our customers
- Be a vocal participant in collaborative design sessions
- Ensure solutions are aligned with Enterprise Architecture principles
- Deliver features using all layers of the stack from front-end to back-end
- Write effective automated tests that ensure quality outcomes
- Continuously improve our code quality
- Be an engaged and thoughtful problem solver
- Stay on the leading edge of software engineering practices and technologies

Required Qualifications & Skills

- 5+ years of experience as a full stack engineer
- Expertise using CI/CD pipelines
- Expertise with modern cloud native development (Docker, Kubernetes, Knative)
- Eagerness and willingness to learn new technologies
- Expertise with Git
- Expertise with RESTful web services

- Strong understanding of SOLID principles and design patterns
- Expertise using database technologies and patterns

Desired Characteristics

- Focus on the success of the team as a whole
- Motivated to learn, share, and produce high quality results
- Effective communicator
- Collaborative
- Adaptable and willing to change in response to new information

A few benefits our employees enjoy

- Comprehensive benefit plans (medical/dental/vision) starting on day 1
- 401(k) with 4% matching
- Discretionary time off
- Discretionary bonus incentive
- Fitness credit
- Several pre-tax plans (dependent care, transportation, flexible spending)
- Transportation reimbursement for qualified positions
- Benefits reimbursement

Physical Requirements/Special Demands

- Must be available to work standard business hours, and occasional nights/weekends.
- Travel may be necessary for team events
