

Role: Software Quality Assurance Engineer (2780)

Location: Folsom, CA

Durations: Contract

Job Description:

- Under the general direction of the Manager, applies test engineering and product knowledge in the design of tests and testing strategies for the validation and quality assessment of CAISO production software products.
- Applies technical and process oriented expertise in the interpretation and application of testing processes aligned to the CAISO quality practices as relates to security, performance, integration and functional (for adapters) testing.
- Responsible for establishing and maintaining the Software Test Automation and Performance Test Engineering code base, integration and security testing posture, assessment of the appropriate level and depth of testing to be applied for the ISO's software releases.
- Leads technical improvements for CAISO Enterprise Test Methodology, procedures, guidelines, and tools to ensure continued operational excellence.
- Provides technical training and expertise to department staff and others as required.

Essential Job Functions:

- Responsible for technical quality assurance of all testing for ISO's software applications or Infrastructure changes.
- Implements robust QA testing practices with a focus on early issue detection; including establishing testing methodologies, standards, tools and techniques for Security, Integration, Load/Performance Test Engineering and functional testing for adapters
- Leads technical aspects of test planning, quantity and quality of tests, ensures requirements are testable and software meets ISO's requirements, with inputs from the Quality Assurance Lead.
- Responsible for estimation of all technical aspects of testing including Integration, Security, Performance, Functional (for adapters) tests and Test Automation efforts, with guidance from the Quality Assurance lead when needed. Optimizes sequencing and scope of technical testing aspect to drive lower Total Cost of Quality for ISO solutions.
- Leads testing teams, related to the quality of tests and test records to ensure all ISO software meets or exceeds the established quality standards and drives sustained reduction in defect escape rates to higher environments, with inputs from the Quality Assurance Lead.
- Provides inputs to enterprise level test framework architecture, integration, and security principles related to software testing.

- Provides inputs on high-value optimal scope for test automation
- Responsible for the planning and execution of the optimum level of Security, Integration and Performance Tests, assessing test results and making recommendations for areas and prioritization to address variances and performance tuning as needed, including recommendations to the QRB, with inputs from the Quality Assurance Lead.
- Establishes and maintains ISO's product baseline tests and incremental test labs/cases and evidence for software security, performance and integration, with inputs from the Quality Assurance Lead.
- Establishes and maintains ISO's Performance and Test Automation framework, perform code-reviews and maintenance of related scripts, with inputs from the Quality Assurance Lead
- Attends business meetings, and collaborates with ISO colleagues to develop "best practices" policies and procedures, and to identify and resolve issues to help create a flexible and emcient organization.
- May perform related duties and activities as assigned.
- Adheres to and supports the Core Values of the ISO.
- Adheres to and supports the safety policies and programs of the ISO. Accountable for implementing the policies and procedures of the ISO Safety Program.

Typical working conditions and physical requirements:

- Located in a comfortable indoor area. Any unpleasant conditions would be infrequent and not objectionable.
- Most of the time is spent in general omce or equivalent conditions which result in little or no exposure to injury or accident.
- May require occasional travel to other omce worksites, customer locations and/or training/conferences.
- Daily time is spent sitting in a comfortable position and with regular opportunity to move about.
- Occasionally there may be a requirement to stoop or lift or handle material or equipment weighing up to 25 pounds.
- May require normal manual dexterity and eye-hand coordination, and corrected vision and hearing to normal range.

Minimum Qualifcations:

Level of Education and Discipline

- A Bachelor's degree (BA, BS) or equivalent education, training or experience in Information Technology, Management of Information Systems, Computer Science, Electrical Engineering or related field. Master's Degree preferred.

Amount of Experience

- Equivalent years of education and training, plus two (2) or more years related experience.

Certifications

Testing certifications from reputable organizations such as ISTQB desirable.

Type of Experience:

- Experience in software quality assurance in one or more areas of software performance testing, UI test automation tools, or web service testing.
- Strong background within an IT software development and maintenance environment with an emphasis in test automation, tool selections, and software quality assurance is required. Familiarity with IT best practices.
- IT Service Management (Change, Configuration, Problem Management), or Process management concepts.
- Demonstrated proficiency in test automation tools and VBS for UFT; Python, SQL Python for Selenium or equivalent.
- Proficiency in performance testing tools, and web service testing. Expertise in Security Testing, performance testing and transaction analysis, integrating automated tests within HP ALM.
- Experience with tools such as ALM, Jira and Confluence. UFT, Selenium or equivalent. Load Runner Professional, Parasoft SOA Test, SOAP-UI, HP Quality Center (ALM), Linux, Windows, Oracle, SQL, XML, VB Script, Python, Perl, Java Script, SPLUNK SPL, Rest API, JSON, Kafka.

Additional Skills and Abilities:

- Demonstrates fundamental management and leadership skills with the ability to work effectively in a team environment as a leader, facilitator and team member.
- Ability to provide practical and feasible solutions to problems, keeping multiple conflicting considerations into account.
- Excellent interpersonal, communication, and writing skills required.

- Excellent analytical skills are required, including the ability to effectively communicate complex technical materials and concepts in a non-technical manner.
- Must be able to handle a dynamic and changing work environment, and work independently. Strong computer skills in Microsoft Office Suite.
- Self-motivated, problem solving skills and the ability to influence others without direct authority. Ability to develop and present training to staff on emerging technologies.
- In addition to providing leadership in the testing disciplines, individuals in this role are also expected to perform hands-on testing as needed.
